

# Backend Engineer Coding Challenge

## Overview

The Data Science team at *CyberCloudBlockchain.AI, Corp.* is working on a revolutionary new algorithm to predict the price of Bitcoin. To aid their efforts, they need immediate access to a collection of historical data from multiple data sources. Your task is to build a RESTful API that serves an aggregated dataset on demand.

## Specification

The API should have one endpoint that takes 2 arguments: `start_date` and `end_date`. It should return an aggregated list of daily time series (one sample per day) for the specified time period from the following data sources.

## Data Sources

Data	Source
Bitcoin price in USD	<a href="https://www.quandl.com/data/BCHAIN/MKPRU">https://www.quandl.com/data/BCHAIN/MKPRU</a> *
Bitcoin Total Output Volume	<a href="https://www.quandl.com/data/BCHAIN/TOUTV">https://www.quandl.com/data/BCHAIN/TOUTV</a> *
Number of Unique Bitcoin Addresses Used	<a href="https://www.quandl.com/data/BCHAIN/NADDU">https://www.quandl.com/data/BCHAIN/NADDU</a> *
[OPTIONAL] Google searches for "bitcoin"	<a href="https://trends.google.com/trends/explore?q=bitcoin">https://trends.google.com/trends/explore?q=bitcoin</a>

\* You can register for a free account on [Quandl.com](https://www.quandl.com)

## Format

The data format returned by the API is up to you, as long as it can be easily reconstructed as a table/DataFrame in the following format:

date	btc_price	output_volume	unique_addresses	btc_trend
2012-01-01	6.32	351231	10002	21
2012-01-02	6.53	362497	10234	23
2012-01-03	6.48	398521	10562	30

## Deployment

Your solution should be deployed via a Docker container running Python 2/3. Please provide the commands to build and run the container.

## Deliverable

Please submit a package with the following:

- All source code
- Instructions on how to build and run the Docker container
- Example API call url (e.g. <http://localhost:8080/api/data>)

### ***Note on performance***

Since the API will be used by multiple users, your solution should reduce response times.
